Eventify

An Event Discovery, Registration & Management Website

PROPOSED PROJECT

EVENT DISCOVERY
+ REGISTRATION
+ ORGANIZER TOOLS

COURSE	PRESENTED TO	GROUP MEMBERS
CSE-2216 Lab Project	Afsana Zaman Nipa Miss	Nusrat Jahan | CSE 2324021 Abrar Faiyaj | CSE 2324019

01 Project Overview

Eventify is a proposed, browser-based platform that brings event discovery, attendee registration, and organizer tools into one clear experience. Visitors can find activities by title, location, category, or price, review event information and available capacity, then submit a registration. Organizers can maintain event listings and review attendee sign-ups from a dedicated dashboard.

02 Problem Statement & Objectives

THE NEED

Event information is often scattered across separate posts and pages, making it harder to compare options and understand how to register. Organizers also need a practical way to maintain event details and keep track of sign-ups.

PROJECT OBJECTIVES

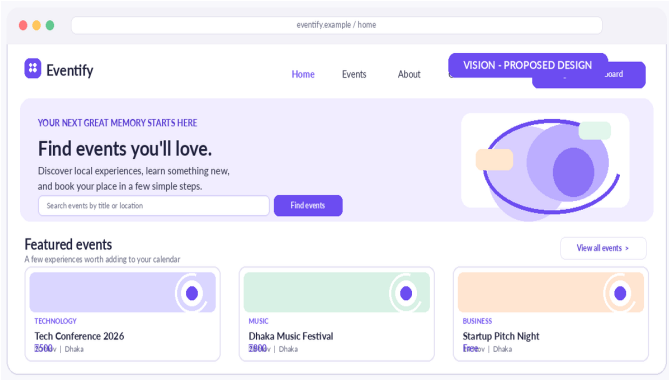

01 Make upcoming events easier to find.
02 Present consistent details, price and capacity.
03 Provide a simple registration flow and organizer controls.

03 Proposed Features

Event discovery Homepage with featured events and a browsable upcoming-events list.	**Search & filters** Search by title or location; filter by category and free/paid price.	**Event details** View descriptions, date, location, price, and remaining ticket capacity.
Attendee registration Enter name, email and ticket quantity; validate details and show confirmation.	**Event management** Organizer can create, edit and delete listings, including price and capacity.	**Registration tracking** Dashboard summaries and a registration table with attendee and ticket details.

04 Conceptual Website Mockups

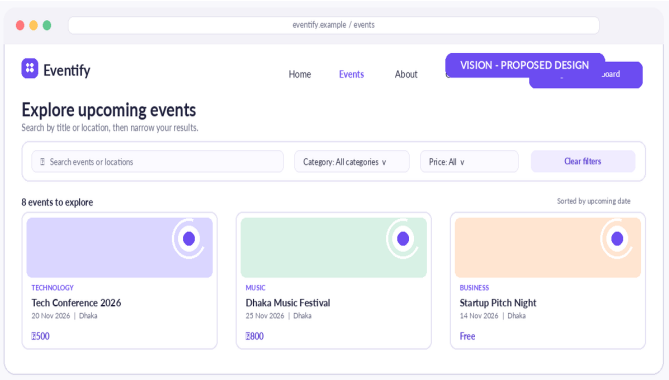

VISION - PROPOSED DESIGN

01 Homepage with featured events

VISION - Proposed layout for the landing page and featured event cards.

VISION - PROPOSED DESIGN

02 Event browsing, search & filters

VISION - Proposed search and filtering experience for event discovery.

FOR ATTENDEES

Find suitable events, compare key details, and complete a clear registration flow.

FOR ORGANIZERS

Maintain event listings, manage capacity, and review attendee sign-ups from one workspace.

Implementation Plan

A focused seven-day roadmap for the proposed Eventify experience.

05 Planned Pages & User Flow

PAGES & NAVIGATION

Attendee journey: Home / About / Contact → Events → Event Details → Register → Confirmation.
Organizer journey: Organizer Dashboard → Add or edit an event → Review event list and attendee registrations.

TECHNOLOGY STACK

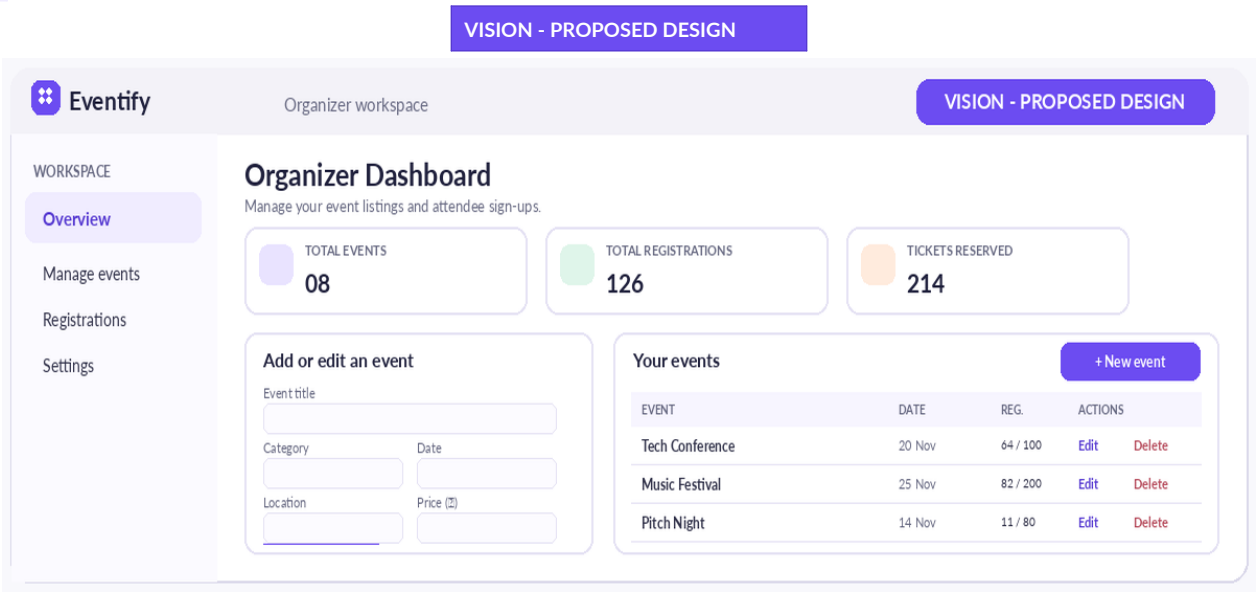

HTML5: page structure and forms
CSS3: responsive visual styling and layout
Vanilla JavaScript: rendering, search, filters, validation and dashboard actions
localStorage: browser-side persistence for events and registrations
SVG assets: category-based event illustrations; Poppins is specified as the interface font.

Scope note: Event and registration data is designed to persist in the current browser. Secure login, real payment processing, email delivery, backend hosting and multi-user synchronization are outside this front-end project scope.

06 Seven-Day Work Plan

DAY	FOCUS	PLANNED WORK
DAY 1	**Requirements & structure**	Define users, scope, page map and event/registration data needs.
DAY 2	**Interface & navigation**	Establish visual styles, shared navigation, page layouts and reusable components.
DAY 3	**Event data & cards**	Define sample event records and reusable event cards with category visuals.
DAY 4	**Browse, search & filters**	Add title/location search, category and price filters, and date-based sorting.
DAY 5	**Details & registration**	Build event details, registration form, input validation, capacity checks and confirmation.
DAY 6	**Organizer tools & data**	Build dashboard summaries, event create/edit/delete workflows and registration tracking with browser storage.
DAY 7	**Testing & demonstration**	Check navigation and edge cases, refine layouts, correct defects and prepare the final demo.

07 Organizer Dashboard - Conceptual Mockup

Proposed organizer workspace for event editing, capacity overview and registration tracking.

08 Expected Outcome

The intended outcome is a clear, multi-page event platform that demonstrates the complete front-end flow from discovery to registration, alongside practical organizer controls. As a CSE-2216 lab project, Eventify provides a hands-on demonstration of HTML structure, CSS presentation, JavaScript-driven interactions, form validation, data handling and user-centered design.
